

Speedframe

Visit www.dexion.com/Product-Categories/Special-Product-Solutions/Speedframe/ for the latest information.

Constructor provides unique storage solutions designed to fulfil special storage demands:

Retail /Shop fitting systems store and present articles in a pleasing way while at the same time being efficient for staff to refill products.

Lean production and picking systems provide storage and easy access to components while working at line production or assembly.

Medical & hospital storage has an extreme demand for security, obvious marking and cleanliness.

Garage and workshop products must provide effective storage for small parts and also for odd shaped products.

Tire rack and tire storage solutions which utilise your space to the maximum.

Speedframe and **Slotted Angle** enable the user to make a storage or display system specific to them, cutting the components to length as required.

Description

Speedframe - a practical solution for your storage and display requirements.

Speedframe square tubing is the simple way to build strong, good-looking frameworks.

Just cut the square tube to length and tap in the joint for a smooth, snag-free structure. Add a few accessories and the framework becomes a bench, a trolley, a work station, a display stand, a machine guard – the list is almost endless and all would be made to measure to be exactly what you require.
